

Casement and Awning

The ever popular casement window is a time honoured classic.

Complimentary to almost any style of home the casement window provides elegant unobstructed views, maximum ventilation, effortless operation and is the ultimate in performance and quality.

The design incorporates multi-chamber construction ensuring extra rigidity and insulating value. Fusion welded corners gives the window structural integrity and outstanding air and water tightness, while its beveled external sash provides a slim line look.

Operating is effortless. The concealed hinges and operator hardware allows the casement window to open like a door. It can be hinged on the right or left, and opens a full 90 degrees allowing 4 inches of hinge side clearance for easy cleaning from the inside of the home. Its multi-point locking system operates easily providing maximum security. Choose an awning window that hinges from the top to have ventilation during light rain.

The casement windows unique style allows it to be used in many different design configurations. By itself or mullered together with other casements, or with fixed architectural shapes, the casement window is flexible to suit almost any opening and is the perfect choice.
