

Double-Hung Double - Slider

Versatility, design and function are the cornerstone of our double tilt window products.

These double tilt windows combine classic elegance with attractive design. The multi chambered design and fusion welded corners provides exceptional strength and durability. Operating these windows is effortless. The weight regulated balances allow sashes to open easily, providing ideal ventilation while the triple fin type weather-stripping provides continuous contact to ensure maximum protection. Exterior and interior cleaning can be done from inside the home with its tilting sashes.

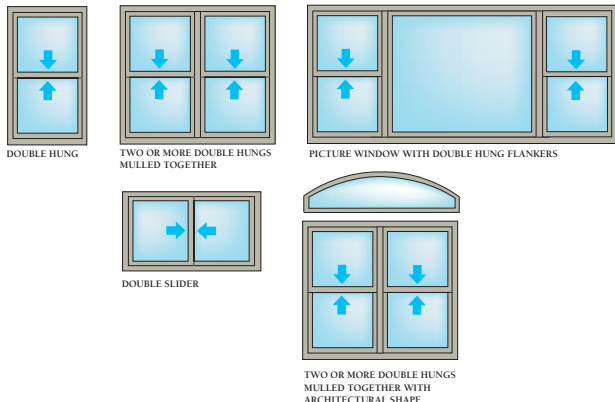

The double tilt window can be made as individual units or may be mulled together in combination with other windows to create the perfect combination that best suits your home. All Alton windows are designed to offer energy efficiency durability and affordability with many years of trouble free performance. The combination of convenient operation and the tilt in feature that simplifies cleaning makes the double tilt window the right choice.
