

Aluminum Windows

Aluminum Casement, Slider and Combination Windows.

Our aluminum windows are designed for strength, long life, low maintenance and superior performance. Extruded from rigid aluminum alloy, these windows are durable enough to meet the most stringent requirements. The energy efficient frames incorporate thermal breaks to prevent the conduction of heat and cold through their frames while the double weatherstripping prevents any air leakage. All of our aluminum window profiles provide clean narrow sightlines and strong structural strength.

At Alton, we manufacture our aluminum windows with design in mind. All of our aluminum windows are custom made to give you choice and flexibility to accommodate almost any opening.
